

What on Earth is going on?

Seminar handout 1a Introduction and Overview

Bible Claims

- Only God can see events future with absolute certainty.
- Why would a God who gave us the ability to question and reason expect us to blindly accept things outside of our experience?
- God has given us 'waypoint' markers in human history for us to know that we are 'en route' to the 'destination' He has promised.
- God chose to do so through the fortunes of one family - the descendants of Abraham would be worldwide witnesses to God's existence (Isaiah 43:1, 9-10).
- That relationship with Abraham's family would have implications for the rest of humanity thereafter (Genesis 12:2-3).

To think about

- Has the Bible been dismissed by modern scientific understanding?
- Do you have to be 'the religious type' to believe its message?
- Is a belief in God and the Bible, His Word, a blind step in the dark?

My questions...

What on Earth is going on?
